

ABSTRACT OF THE DISCLOSURE

An improved structure of hair scissors, in particular containing a set of especially designed of bolt and nut assembly mounted on the blade instead of the pivot screw. The bolt and nut assembly comprises at least a bolt, a plastic washer, 5 a metal washer, a circlet and a lock nut. Especially the bolt has a threaded square shank on which the plastic washer, two blades, the metal washer, and the circlet are mounted in order and finally locked by the lock nut. The bolt head has an oval hole to receive the turning-in of the bolt thread shank. The bolt and the nut are easily assembled to form a hair scissors to gain diversity in hair cutting.
